

Fundamentals of Data Management

Pass Task 2.1.3: Semi-Structured Data: XML and JSON

Overview

In this tutorial, you'll create and query an XML document and translate it to JSON.

Purpose

Learn how to create and navigate tree-structured data formats. Acquaint yourself with the XML and JSON formats.

Task

Use a text editor (such as Notepad++ to construct your answers to the questions below. Test your XQuery expressions on the web site shown under 'Resources'.

Time

This task should be completed before end of your second lab class and submitted for feedback.

Resources

- Online resources, e.g.
 - http://www.w3schools.com/xquery/xquery_example.asp (XQuery)
 - <http://www.tutorialspoint.com/xquery/index.htm> (XQuery)
- Web site for trialing XQuery expressions:
 - <http://videlibri.sourceforge.net/cgi-bin/xidelcgi>

Feedback

Discuss your solutions with the tutorial instructor.

Pass Task 2.1.3 — Submission Details and Assessment Criteria

Document your solutions to the tasks in a report using the template provided. Upload the Pass level work to Doubtfire. The tutors will discuss them with you in the lab.

Subtask 2.1.3

Write an XQuery FLWOR expression that lists only the titles and authors of the books that James hasn't read yet. Test the query, document, and upload it.
